AutoSave for System Platform Named Wonderware HMI and SCADA Technology Partner Product of the Year by Schneider Electric Software

MDT's AutoSave for System Platform recognized for the second time in four years for its significant value for Wonderware customers

ALPHARETTA, Georgia, March 29, 2016 – MDT Software, a world leader in change management solutions for automated manufacturing assets, today announced that its AutoSave for System Platform software solution has been named the 2015 Wonderware HMI and SCADA Technology Partner Product of the Year by Schneider Electric Software. The award recognizes the value of AutoSave for System Platform, a product that enhances the Wonderware System Platform product with advanced version control for objects. AutoSave for System Platform was also named the Partner Productivity Product of the Year in 2011.

“This award recognizes the significant benefits that AutoSave for System Platform provides to our System Platform customers in a variety of industries where object-level change tracking, reporting and rollback are necessary to meet compliance and operational objectives,” said Gary Tillery, Leader, Partner Group, Schneider Electric Software.

AutoSave for System Platform enhances change management at the application object level for graphics, templates and instances of application objects within Wonderware's ArchestrA System Platform environment. With complete version history of changes, AutoSave for System Platform increases the value of the System Platform software offering by protecting intellectual property in the system design and by providing greater insight into important changes over the life of each application object. This award further validates that enabling greater experimentation during design phases, greater protection of the customer's system design and rapid rollback of undesirable changes are extremely important to System Platform users.

The award was presented at the Schneider Electric Software Global Partner Summit 2016 in Lake Forest, CA. It was presented to Gary Gillespie, MDT Vice President, by Ravi Gopinath, Executive Vice President, Software, Schneider Electric.

“We are proud to have created an award-winning product that has proven to enhance productivity within the System Platform offering,” said Gillespie. “And now, with greater integration between AutoSave for System Platform and our flagship product, AutoSave, these customers can safeguard their entire automation layer from downtime and errors related to programming changes.”

About MDT Software, Inc.

MDT Software is a world leader in change management solutions for automated manufacturing devices. AutoSave for System Platform is built upon MDT's flagship product, AutoSave that empowers users to protect, save, restore, discover, and track changes in industrial programmable devices and plant-floor documents. AutoSave supports the most comprehensive range of devices and editors in the industry from Schneider, Siemens, Mitsubishi, Indramat, Invensys, GE, Rockwell Automation and others.
