## **MDT Software Announces New Release of AutoSave Change Management Software with Support for Windows 7**

**ALPHARETTA, Georgia, July 6, 2011** – MDT Software, a world leader in change management solutions for automated manufacturing assets, today announced the release of AutoSave version 5.06, the newest version of its software product. AutoSave 5.06 features include support for Windows 7 32-bit and Windows 2008 64-bit server, as well as user enhancements based on customer requests and input. This release also contains an updated AutoSave Reports Module and introduces a new license utility tool, the MDT Broker.

AutoSave change management software interfaces with third party PLC editor packages to provide archival backups, change detection, change documentation, historical tracking, secured user and workstation, disaster recovery, controlled editor operations, and automatic change notification. When control vendors such as Rockwell, Schneider, Invensys and others release Windows 7 compliant programming applications, MDT has quickly responded with support for those applications.

“Constantly driven by customer needs, we are dedicated to delivering innovative solutions that keep pace with a rapidly changing technology landscape,” commented Gary Gillespie, vice president and general manager of MDT Software. “In supporting the latest release of Windows, we ensure that our customers that have implemented Windows 7 can continue to safeguard their automated programs with AutoSave.”

The AutoSave Reports Module further enhances the reporting capability of AutoSave by allowing users to generate over 70 unique reports from the historical data stored in AutoSave's database. The MDT Broker simplifies the licensing process by transmitting a license request to MDT and installing the license file automatically, through a simple, graphic interface.
