## **MDT Software Announces New Release of AutoSave Change Management Software with Support for Non-Networked Devices**

**ALPHARETTA, Georgia, October 24, 2014**— MDT Software, a world leader in change management solutions for automated manufacturing assets, today announced the release of AutoSave version 6, the newest version of its software product. AutoSave version 6 represents a significant expansion in the functionality of AutoSave with the ability to manage changes to devices that are non-networked, even in very remote areas.

AutoSave Change Management Software protects, saves, restores, discovers, and tracks changes in industrial programmable devices. In using AutoSave to manage program changes, automation users can protect the intellectual property in their automation layer across their enterprise; helping to avoid risk regardless of the environment and device type for rapid recovery from hardware failures, mistakes, sabotage and other hazards. This latest version of AutoSave includes a new AutoSave client interface extending this protection to non-networked devices by enabling users to make changes to programs in the field, then analyze and sync all changes to the server upon return to the office. Other benefits include:

- Provide version control for devices programs in remote areas
- Track changes in non-networked devices in the plant
- Enable System Integrators and off-site development teams to work on programs without providing direct access to the device
- View a history of changes performed on each device
- Compare the program running in the device to the program on the engineer's laptop
- Copy programs to create new programs in the field.

“This release of AutoSave productizes a multi-year collaborative effort with one of the largest water authorities in Australia. They have the need to manage devices in remote areas across the continent, as well as their large treatment plants” explained Gary Gillespie, vice president, MDT Software. “We are very pleased to provide this solution to all customers who have similar needs.”

In addition to enhanced management of non-networked devices, AutoSave v6 also includes new searchable online documentation, expanded SQL and operating system support and other functional improvements increasing usability and efficiency.

**About MDT Software, Inc.**

MDT Software is a world leader in change management solutions for automated manufacturing devices. MDT's flagship product, AutoSave, empowers users to protect, save, restore, discover, and track changes in industrial programmable devices and plant-floor documents. AutoSave supports the most comprehensive range of devices and editors in the industry from Schneider, Siemens, Mitsubishi, Indramat, GE, Rockwell Automation and others.
