

AutoSave for System Platform v5.00

New Features and Benefits of Autosave for System Platform v5.00 include:

The 5.00 release of AutoSave for System Platform (A4SP) runs on SP 2020 without the need for any GRAccess or DevStudio requirement.

- **Support for System Platform 2020:**

- This new version supports System Platform 2020 (or multi-Galaxy systems with SP2020 and older System Platform versions back to 2014. Users of System Platform 2014 through 2017 Upd 3 (not needing SP2020 support) should continue to use A4SP v4.x.
- On SP2020 only, A4SP v5 runs without the need for a DevStudio to be running on the GR Node!
- On SP2020 only, A4SP v5 no longer requires an additional GR Access license to run!

- **All features of A4SP v4.0 are carried forward into v5.0, including:**

- Rename feature for Galaxies and Nodes: Moving Galaxies to new hardware, nodes or just a rename of Galaxy is now supported, while maintaining history.
- Support for Object to Object compare: Previously, compares between an object versions was possible. Now, compares between different objects is possible.
- Object compare between Galaxies: An object to object compare between two Galaxies supported by A4SP is now possible.
- Galaxy Summary compare: Compare of a Galaxy to CAB (or CAB to CAB) revisions of that Galaxy is now possible, for Galaxies managed by A4SP.
- Option to decrease warnings due to checked-out objects.
- Improved Objects-Changed report interface.
- Support for new attributes included in the latest release of System Platform
